Bringing Visual Integrity

With the design concept of the headquarters of Bajaj Finserv located in Viman Nagar, Pune, **NCUBE Planning & Design** presents a structured brief for a new-age office layout

A close-knit layout was conceptualized for the office space with a strong emphasis on centrality and segregation of movement for fluidity in movement. The cabins face their back to the reception and waiting area, providing an opaque edge that maintains privacy and security

within. The workstation areas are centrally located, with cabins and meeting rooms forming the periphery of the layout. Thus, cabins delineate geometry, and being inward looking, retain the visual integrity. This creates a solid ground for interaction and robust communication.

We aim at incorporating the multiple avenues required in the transformation of a corporate space with solutions that reflect the pragmatic needs of the end-users and the demands of a sustainable world to create spaces that seamlessly combine form, function and feel

Debora Emert, Design Director

The entire workspace is dotted with such spaces that open up to become breakout zones when required; they generate movement and multiple interactions. High raised ceilings seem to enhance the space. Unique meeting pods help break the monotony and lend pops of colour to the

workspace. The boho look here is inviting and takes focus off the otherwise serious outlook. A black frame against clear glass, off-beat furniture, and flexible spaces that create a formal atmosphere when needed, lighten the intensity of a corporate structure. **MGSA**
